

# Probability Assignment 1

EE22BTECH11026 - KARTHIKEYA HANU PRAKASH KANITHI

**Question :** Suppose  $X$  is a binomial distribution  $B\left(6, \frac{1}{2}\right)$ . Show that  $X = 3$  is the most likely outcome. (Hint :  $P(X = 3)$  is the maximum among all  $P(x_i), x_i = 0, 1, 2, 3, 4, 5, 6$ )

**Solution:** Given that,  $X$  is a binomial distribution with parameters

$$n = 6 \quad p = \frac{1}{2} \quad (1)$$

the probability of getting exactly  $k$  successes in  $n$  trials is given by

$$p_X(k) = \binom{n}{k} p^k (1-p)^{n-k} \quad (2)$$

From equations in (1), The pmf simplifies as,

$$p_X(k) = \binom{6}{k} \left(\frac{1}{2}\right)^k \left(\frac{1}{2}\right)^{6-k} \quad (3)$$

$$= \binom{6}{k} \left(\frac{1}{2}\right)^6 \quad (4)$$

We know that  $\binom{6}{k}$  can be written as,

$$\binom{6}{k} = \frac{6!}{(6-k)!k!} \quad (5)$$

If pmf is the greatest, then  $\binom{6}{k}$  is the greatest for  $k \in [0, 6]$ , Therefore It can be said that,

$$\binom{6}{k} > \binom{6}{k-1} \quad \text{and} \quad (6)$$

$$\binom{6}{k} > \binom{6}{k+1} \quad (7)$$

From (5) and (6), we can state that

$$\frac{6!}{(6-k)!k!} > \frac{6!}{(6-k+1)!(k-1)!} \quad (8)$$

$$\Rightarrow \frac{6!}{(6-k)!k!} > \frac{6!}{(6-k)!k!} \frac{k}{6-k+1} \quad (9)$$

$$\Rightarrow 1 > \frac{k}{6-k+1} \quad (10)$$

$$\therefore k < \frac{7}{2} \quad (11)$$

From (5) and (7), we can state that

$$\frac{6!}{(6-k)!k!} > \frac{6!}{(6-k-1)!(k+1)!} \quad (12)$$

$$\Rightarrow \frac{6!}{(6-k)!k!} > \frac{6!}{(6-k)!k!} \frac{6-k}{k+1} \quad (13)$$

$$\Rightarrow 1 > \frac{6-k}{k+1} \quad (14)$$

$$k > \frac{5}{2} \quad (15)$$

We know that,  $k \in R$  and  $k \in [0, 6]$  and from (11) and (15),

$$k < \frac{7}{2} \quad \text{and} \quad k > \frac{5}{2} \quad (16)$$

$$\therefore k = 3 \quad (17)$$

Hence proved that,

$$X = 3 \quad (18)$$

is the most likely outcome and  $p_X(3)$  is

$$p_X(3) = \binom{6}{3} \left(\frac{1}{2}\right)^6 \quad (19)$$

$$= \frac{5}{16} \quad (20)$$
