Probability Assignment 1

EE22BTECH11026 - KARTHIKEYA HANU PRAKASH KANITHI

Question: Show that A, D, G are collinear

Solution: Given that,

$$\mathbf{A} = \begin{pmatrix} 1 \\ -1 \end{pmatrix} \quad \mathbf{B} = \begin{pmatrix} -4 \\ 6 \end{pmatrix} \quad \mathbf{C} = \begin{pmatrix} -3 \\ -5 \end{pmatrix} \tag{1}$$

We need to show that points A, D, G are collinear.

By taking reference from the previous problems, we can conclude that

From Problem 1.2.3 We know that, The point G is

$$\mathbf{G} = \begin{pmatrix} -2\\0 \end{pmatrix} \tag{2}$$

And from Problem 1.2.1 We know that, The point **D** is

$$\mathbf{D} = \begin{pmatrix} \frac{-7}{2} \\ \frac{1}{2} \end{pmatrix} \tag{3}$$

In Problem 1.1.3, There is a theorem/law mentioned i.e.

Points A, D, G are defined to be collinear if

$$rank \begin{pmatrix} 1 & 1 & 1 \\ \mathbf{A} & \mathbf{D} & \mathbf{G} \end{pmatrix} = 2 \tag{4}$$

Using the above law/Theorem Let

$$\mathbf{R} = \begin{pmatrix} 1 & 1 & 1 \\ 1 & \frac{-7}{2} & -2 \\ -1 & \frac{1}{2} & 0 \end{pmatrix} \tag{5}$$

The matrix \mathbf{R} can be row reduced as follows,

$$\begin{pmatrix} 1 & 1 & 1 \\ 1 & \frac{-7}{2} & -2 \\ -1 & \frac{1}{2} & 0 \end{pmatrix} \xrightarrow{R_3 \leftarrow R_3 + R_2} \begin{pmatrix} 1 & 1 & 1 \\ 1 & \frac{-7}{2} & -2 \\ 0 & -3 & -2 \end{pmatrix}$$
 (6)

$$\stackrel{R_2 \leftarrow R_2 - R_1}{\longleftrightarrow} \begin{pmatrix} 1 & 1 & 1 \\ 0 & \frac{-9}{2} & -3 \\ 0 & -3 & -2 \end{pmatrix} \tag{7}$$

$$\stackrel{R_3 \leftarrow R_3 - \frac{2}{3}R_2}{\longleftrightarrow} \begin{pmatrix} 1 & 1 & 1 \\ 0 & \frac{-9}{2} & -3 \\ 0 & 0 & 0 \end{pmatrix}$$
(8)

Hence, we proved that that points A, D, G are collinear.
